

# NodeMCU custom build finished

NodeMCU custom build <bldr@nodemcu-build.com>

mar. 17.12.2019 21:29

À :christian@zufferey.com <christian@zufferey.com>;

Your NodeMCU custom build finished successfully. You may now download the firmware:

- float: <https://nodemcu-build.com/builds/nodemcu-master-18-modules-2019-12-17-20-28-32-float.bin>
- integer: <https://nodemcu-build.com/builds/nodemcu-master-18-modules-2019-12-17-20-28-32-integer.bin>

This was built against the master branch and includes the following modules: adc, ads1115, bit, enduser\_setup, file, gpio, http, i2c, net, node, ow, rtctime, si7021, sntp, spi, tmr, uart, wifi.

The files are guaranteed to be available for download for 24h.

I invite you to try the new GUI tool <https://github.com/marcelstoer/nodemcu-pyflasher>

Learn how to flash the firmware: <https://nodemcu.readthedocs.io/en/master/en/flash/>. If you're upgrading from a previous version you should carefully study the "Upgrading Firmware" instructions on that page.

Please help keep this service alive: <http://nodemcu-build.com/faq.php#support>
