

Value Stream Management

Everything You Need to Know about Implementing VSM and Selecting the Right Tools.

XebiaLabs

OPEN

Strike!

You successfully commissioned a NodeMCU custom build from the master branch. You selected the following 19 modules: adc bit crypto ds18b20 file gpio http i2c net node ow pcm rtctime sntp spi tmr uart wifi ws2812.

We'll keep you posted by email about the progress of your build.

In the meantime I suggest you take a look at the build stats (stats.php) to find out how your firmware configuration compares to others in the community.

Pay-back time

Do you like this service?

Imagine I were your neighbour, the guy next door.

Would you buy me a beer for all the hard work I do for you? Chances are I'm *not* right next door but the beauty is: beer can be teleported thanks to quick'n easy PayPal donations (https://www.paypal.com/cgi-bin/webscr?cmd=_s-xclick&hosted_button_id=7DWME2TBHH6B8). In Switzerland a beer costs around \$5 in a bar.

The other way to support this service is by shopping at Banggood (<http://www.banggood.com/?p=PT19151269030201502M>) or AliExpress (<http://s.click.aliexpress.com/e/qVRvJMbqB>) through my affiliate links. For every item you buy I get a small kickback. Thank you!
